

Beijing Gang Yan Diamond Products Company (Gang Yan) was started by Central Iron & Steel Research Institute

(CISRI) in 1993. As No.1 research institution in China, CISRI has over 55 years of experience in developing advanced materials and setting national standards for materials processing and analyzing. Gang Yan was set up to take advantage of the extensive research CISRI has done in the powder metallurgy. In 1999, CISRI grouped five of its industrials in the field of new materials and products, including Gang Yan, and established a new company named Advanced Technology & Materials Co. Ltd. (AT&M). In 2001, AT&M was listed on China Shen Zhen Stock Market, and Gang Yan became the only company listed on stock market in diamond tools industry in China.

This high technology and strong financial background has enabled Gang Yan, with its innovative-patented processes and sophisticated equipment, to produce quality diamonds tools of exceptional and most stable quality. Gang Yan has been adopting the ISO9001 for more than 10 years. In 2006 Gang Yan joined oSa and became its first and solo member in China at this stage. Constant in-house self testing and monitoring for product safety enable Gang Yan's diamond tools to meet the most stringent safety requirement of EN standards. As the first company specialized in diamond tools in China, and through the last ten years of step by step improving, Gang Yan has become a worldwide leading manufacturer of diamond tools, and now is a major supplier to most of the largest manufacturers and distributors in the world. More than 90% of Gang Yan's products are for export market.

Gang Yan mainly focuses on laser welding, brazing and sintering process for diamond blades, diamond core bits, diamond grinding wheels, and diamond wire saw, totally more than 300 types of diamond tools. Ten automatic laser-welding lines make Gang Yan the largest supplier of laser blades in China. The state-of-the-art manufacturing equipment, precise production engineering, and effective quality control system assure all of our products exactly meet their designed specifications and satisfy the customer's requirements.

A creative and experienced bond system provides Gang Yan's products a high cost/performance ratio in a broad range of application, effective in both construction and stone industry and successful in both professional and DIY market. New functional products are developed each month by our R&D team. Gang Yan also private labels for large OEM's, including designing, marking, printing, and packaging to their specifications. Our extensive experience in international trading ensures our customers enjoyed to directly order shipment from China or through our US office.

SYSTEM RADEMARK

PDAPRO

The innovative patterned diamond arraying technology distributes particles precisely in 3D patterns

V-Tech is a brand new diamond tools manufacturing know-how, developed on the basis of, yet far more innovative than, vacuum brazing technology.

Titan_{633™}

An innovative bond formulation developed on the basis of the advanced alloying technology for professional laser core bits, focusing the heavy duty reinforced concrete coring.

Titan716™

The latest bond formulation developed on the basis of the advanced alloying technology.

Full color Painting

The latest Eco-friendly full color painting technology makes diamond blades as beautiful as you imagine.

ARROW®

Series supreme laser blades

The original ARROW turbo segments in brand new bond provides a unique solution of smoothly cutting.

SABRE

Series supreme laser blades

With its sharp edge and hard steel, Sabre helps soldiers win the battle and help you win the competition.

Series supreme laser blades

Swordfish is not a real fish but a real fast cutting blade.

Series concrete grinding productsThe reliable and sufficient solutions for floor preparation

^{*}Premium quality level products are suitable for asphalt or fresh concrete.

^{**}Professional quality level products are suitable for asphalt and fresh concrete with hard aggregates.

Early Entry & Loop Blades

Laser wedled Early entry green concrete blades with patented arbor hole designed for Soff-Cut and other brand early entry road saws.

Soff cutting road saws are designed to get onto the concrete slab earlier than conventional floor / road saws. They are designed to carry out expansion cutting within two hours of finishing and before final set of concrete. Soff cut machines are designed to cut from 25—75mm in depth.

Professional blades for cutting pre-cast concrete, prestressed concrete, composite hollow concrete and other type of reinforced concrete products.

The products are recommended for bridge saws or rail saws with sufficient water cooling.

Advantages:

- Professional quality diamonds.
- Diamond distribution optimized by latest granulation technology.
- High diamond concentration.
- Silent steel bodies are available.

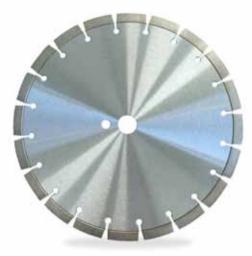

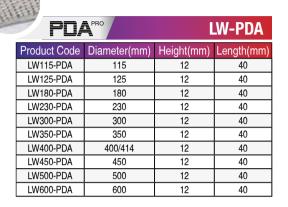

Hand Held Saws Table Saws Low Power Road Saws

Cured Concrete, Stones & Hard materials

The efficient cutting solution with PDA PRO laser welded blades. Cured concrete, hard bricks, granites and other hard materials are recommended to cut.

EN13236 standards certificated products guarantees a safe cutting in wet or dry conditions.

The 105 mm -230 mm blades are recommended for angle grinders, tables saws and portable saws; 300 mm- 600 mm high tensile strength blades are suitable for all the popular handheld power cutters or low power saws.

| LWUKQ450 | 450 | 12 |

A range of latest designed laser welded blades for the cutting of cured concrete, clays, stones and other hard materials. The high tensile strength steel cores with cooling holes guaranteed the best performance whatever in wet or dry using.

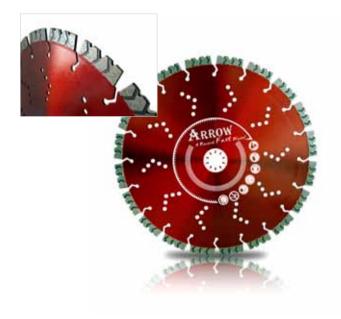

The 105 mm -230 mm blades are recommended for angle grinders, tables saws and portable saws; 300 mm-450 mm blades are suitable for all the popular handheld power cutters and low power road saws.

Various designs of segments and slots satisfied all your marketing requirements.

The original ARROW turbo segments in brand new bond provides a unique solution of smoothly cutting nearly all hard materials, including hard concrete with steel bars, granite, clay block paviors, engineering blocks.

Advantages:

- Brand new bond formulation;
- ■15 mm top waved segments;
- Laser welded products certificated by EN13236
- New ecofriendly full color printing technology

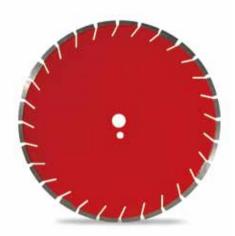

Sabre ®

Sabre, with its sharp edge and hard steel, helps soldiers win the battle and help you win the competitions.

Sabre series laser welded blades for dry or wet cutting cured concreted, hard bricks, clay products and other hard materials.

Wedge segment

Laser welded blades for cutting asphalt, green concrete and abrasive materials. EN13236 standards certificated products guaranteed a safe cutting in both wet and dry conditions.

The full series products have drop, slant or wedge segments protecting the blades from undercutting. Economic, standard and premium quality levels products options are in offer.

Features high tensile strength steel cores, the range of products are suitable for every popular brand handheld power cutters and low power road saws.

Crack chasing blades, very durable products.

PCD blades

Cement fiber board

PCD, polycrystalline diamonds, consists of micron-sized synthetic diamond powders bonded together by sintering at high pressures and temperatures.

PDC, a new functional composite made of polycrystalline diamonds (PCD) and tungsten carbide substrates through super high temperature pressing technology, features high hardness, good wear resistance and thermal conductivity. PDC has become the ideal materials for blades, drills and grinding tools.

| | | | GE-PCD |
|--------------|---------------|----------------|---------------|
| Product Code | Diameter (mm) | Thickness (mm) | Segments No. |
| GE150-PCD | 150 | 4.0 | 6 |
| GE160-PCD | 160 | 4.0 | 6 |
| GE184-PCD | 184 | 4.0 | 6 |

Gang Yan

What's V-Tech?

V-Tech[†]

out of the bond, much higher than that of sintering and electroplating, leaving better clearance on tools surface, significantly improving cutting efficiency and

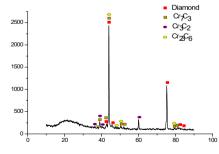

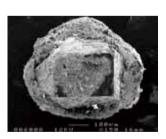

Unique diamond holding capability

V-Tech creats a chemical bonding between diamond to the substrate. The diamond crystal is retained on the tool in continuous cutting untill totally wearing itself out. Therefore, the working life of V-Tech tools is highly increased over traditional tools.

The breakthrough of V-Tech eliminates heat injury to diamond which often happens on traditional tools. It maintains the best chemical and physical performance of diamond and prevents it from any damage.

Multi-purpose

A range of V-Tech multi-purpose blades, the 300 -800 mm blades are laser welded with high tensile steel bodies, nearly no vibration in cutting steel and ductile irons.

Suitable for angle grinders, portable saws and hand held cutt off saws.

The best choice for rescue cutting in emergency.

V-Tech

Brand new V-Tech diamond reciprocating saw blades and jig saw blades.

Advantages:

High quality steels

Multi purpose using.

Non-binding cutting edge

Efficient and durable cutting

The 105 mm-230 mm blades are recommended for electric angle grinders and portable saws; 250 mm-350 mm blades are recommended for chop saws or power cutters.

Advantages:

- 50X longer life over the abrasive disc
- Less smoke and fewer sparks in cutting
- Smooth cutting without vibration

V-Tech[™]

Tile Drill Bits

Vacuum brazed tile bits for dry drilling all kinds of tiles including ceramic, porcelain and marbles. Ideal for cordless drills. Fast speed and good life.

Vacuum brazed tile bits for dry or wet drilling all kinds of tiles including hard ceramic, porcelain and marbles. Ideal for angle grinders and hand held drill machines. 5-14 mm drill bits have cooling wax inside.

Diamond Core Bits THE GLOBAL CUTTER'S WAY

Reinforced Concrete

A comfortable solution for all professional drillers.

PDA RPO series laser welded cores bits. 52-300 mm for rig based coring with water cooling.

Adavantages:

- High welding strength;
- Fast speed guaranteed in drilling rebars.
- Run out control, no wobbling;

Titan_{633™}

Laser welded wet core bits for reinforced concrete. Latest formulation Titan633 innovated for the heavy duty concrete coring. Water cooling is needed.

Advantages:

- High welding strength;
- Fast speed guaranteed in drilling rebars.
- Run out control, no wobbling;
- Maximum diameter to 600 mm;

Laser welded core bits for asphalt. The 47-350 mm products are designed for rig based coring with water cooling.

Advantages:

- High welding strength;
- Long usable life guaranteed.
- Run out control, no wobbling;
- Maximum diameter to 350 mm;

Application Instruction:

^{*}Premium quality level products are suitable for the wet coring of concrete with soft, medium hard aggregate and rebars.

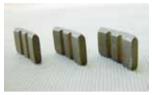

^{**}Professional quality level products are suitable for wet coring of cured concrete with flint, quartz granite, gravel, and other hard aggregates and heavily reinforced concrete.

Dry Cores

Titan_{716™}

A range of laser welded cores for the dry cutting of hard bricks, concrete wall, and lightly reinforced concrete, with special core barrels as well as soft bond segments.

Advantages:

- Conical & Spiral core barrel designs
- Arrow turbo segments;
- Laser welded products;

THE GLOBAL CUTTER'S WAY

Grinding Shoes

Floor Preparation

EP Floor contains a series diamond shoes developed on the basis of advanced alloying and high tech brazing technology, after more than 10 years' researching and exploring in concrete grinding field, the EP Floor has become the reliable and sufficient solutions for concrete floor preparing.

EP Floor offers a full range of products for different hardness and toughness concrete floors, with the applications from coating removal to fine grinding.

Description:

High performance diamond wire for block cutting.

Applications:

Granite, marble, sandstone.

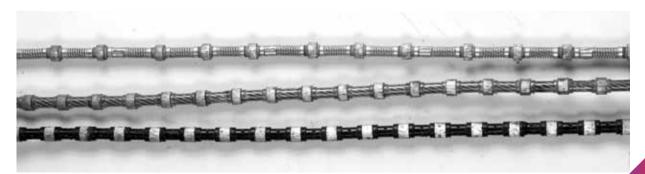

Connection:

Rubber, plastic, spring.

Diameter available:

8.5mm, 10.5mm, 11.5mm Number of beads/m: 33,37,40.
